## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of claims 1-5 in the reply filed on 4/23/04 is acknowledged. The remaining claims 6-12 are withdrawn.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 6,030,581 (Virtanen) in view of USP 6,506,594 B1 (Barany et al.) or USP 6,153,425 (Kozwicz et al.).

The Barany et al. patent discloses a PCR chain reaction process and a ligase detection process which utilizes amplification agent and detection agent as claimed (col.14, lines 44-col.15, line 39). The Virtanen patent discloses the use of an optical disk for performing PCR chain reaction and detection methods (example 1).

Art Unit: 1744

Accordingly, it would have been obvious to one skilled in the art that the Virtanen optical disk could incorporate the amplification agent and detection agent disclosed in the PCR method in Barany et al. in view of the known use of the optical disk.

The Kozwicz et al. patent discloses an amplification and detection process which utilizes amplification agent and detection agent as claimed (example 5). The Virtanen patent discloses the use of an optical disk for performing PCR chain reaction and detection methods (example 1). Accordingly, it would have been obvious to one skilled in the art that the Virtanen optical disk could incorporate the amplification agent and detection agent disclosed in the PCR method in Kozwicz et al. in view of the known use of the optical disk.
